
**Report of working group 1:
Chronology of the Younger Dryas**

Reporters: Bard and Kromer

The results of this session are discussed in Bard and Kromer (this volume)

In addition, the following suggestions were made:

- More and precise AMS dates on macrofossils to show the timing at the termination of the Younger Dryas.
- Use the Vedde ash layer as a link between marine sediments and the ^{14}C dated terrestrial record
- Coral-based calibration series from areas of low tectonic activity
- Floating tree-ring chronologies for Bølling-Allerød to show the ^{14}C variations (decide about the offset between ^{14}C and absolute age)
